

Science overview – Year 2

Living things and their habitats	Animals including humans	Animals including humans
<p>Pupils should be taught to:</p> <ul style="list-style-type: none"> • explore and compare the differences between things that are living, dead, and things that have never been alive. • identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other • identify and name a variety of plants and animals in their habitats, including micro-habitats • describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food. <p>Notes and Guidance (non-statutory): Pupils should be introduced to the idea that all living things have certain characteristics that are essential for keeping them alive and healthy. They should raise and answer questions that help them to become familiar with the life processes that are common to all living things. Pupils should be introduced to the terms 'habitat' (a natural environment or home of a variety of plants and animals) and 'micro-habitat' (a very small habitat, for example for woodlice under stones, logs or leaf litter). They should raise and answer questions about the local environment that help them to identify and study a variety of plants and animals within their habitat and observe how living things depend on each other, for example plants serving as a source of food and shelter for</p>	<p>Pupils should be taught to:</p> <ul style="list-style-type: none"> • notice that animals, including humans, have offspring which grow into adults • find out about and describe the basic needs of animals, including humans, for survival (water, food and air) <p>Notes and Guidance (non-statutory): Pupils should be introduced to the basic needs of animals for survival. They should also be introduced to the process of reproduction and growth in animals. The focus at this stage should be on questions that help pupils to recognise growth; they should not be expected to understand how reproduction occurs. The following examples might be used: egg, chick, chicken; egg, caterpillar, pupa, butterfly; spawn, tadpole, frog; lamb, sheep.</p> <p>Pupils might work scientifically by:</p> <ul style="list-style-type: none"> • observing, through video or first-hand observation and measurement, how different animals grow; • asking questions about what things animals need for survival suggesting ways to find answers to their questions. <p>Key vocabulary: offspring, reproduction, growth, child, young/old stages (examples - chick/hen, baby/child/adult, caterpillar/butterfly), (examples – meat, fish, vegetables, bread, rice, pasta)</p>	<p>Pupils should be taught to:</p> <ul style="list-style-type: none"> • find out about and describe the basic needs of animals, including humans, for survival (water, food and air) • describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene. <p>Notes and Guidance (non-statutory): Pupils should be introduced to the basic needs of animals for survival, as well as the importance of exercise and nutrition for humans. They should also be introduced to the process of reproduction and growth in animals [humans]. The focus at this stage should be on questions that help pupils to recognise growth; they should not be expected to understand how reproduction occurs. Growing into adults can include reference to baby, toddler, child, teenager, adult.</p> <p>Pupils might work scientifically by:</p> <ul style="list-style-type: none"> • observing, through video or first-hand observation and measurement, how humans grow; • recording their findings using charts • asking questions about what things animals [humans] need for survival and what humans need to stay healthy; • suggesting ways to find answers to their questions. <p>Key vocabulary: exercise, heartbeat, breathing, hygiene, germs, disease, food types</p>

Science overview – Year 2

animals. Pupils should compare animals in familiar habitats with animals found in less familiar habitats, for example, on the seashore, in woodland, in the ocean, in the rainforest.

Pupils might work scientifically by:

- sorting and classifying things according to whether they are living, dead or were never alive, and
- recording their findings using charts
- describing how they decided where to place things,
- exploring questions such as: 'Is a flame alive? Is a deciduous tree dead in winter?' and
- talking about ways of answering their questions.
- constructing a simple food chain that includes humans (e.g. grass, cow, human);
- describing the conditions in different habitats and micro-habitats (under log, on stony path, under bushes);
- finding out how the conditions affect the number and type(s) of plants and animals that live there

Key vocabulary: living, dead, never been alive, suited, suitable, basic needs, food, food chain, shelter, move, feed

Names of local habitats e.g. pond, woodland etc.

Names of micro-habitats e.g. under logs, in bushes etc

Science overview – Year 2

Plants	Use of everyday materials
<p>Pupils should be taught to:</p> <ul style="list-style-type: none">observe and describe how seeds and bulbs grow into mature plantsfind out and describe how plants need water, light and a suitable temperature to grow and stay healthy. <p>Notes and Guidance (non-statutory): Pupils should use the local environment throughout the year to observe how different plants grow. Pupils should be introduced to the requirements of plants for germination, growth and survival, as well as the process of reproduction and growth in plants. Note: Seeds and bulbs need water to grow but most do not need light; seeds and bulbs have a store of food inside them.</p> <p>Pupils might work scientifically by:</p> <ul style="list-style-type: none">observing and recording, with some accuracy, the growth of a variety of plants as they change over time from a seed or bulb,observing similar plants at different stages of growth;setting up a comparative test to show that plants need light and water to stay healthy <p>Key vocabulary: leaf, flower, blossom, petal, fruit, berry, root, seed, trunk, branch, stem, bark, stalk, bud light, shade, sun, warm, cool, water, grow, healthy</p>	<p>Pupils should be taught to:</p> <ul style="list-style-type: none">identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular usesfind out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching <p>Notes and Guidance (non-statutory): Pupils should identify and discuss the uses of different everyday materials so that they become familiar with how some materials are used for more than one thing (metal can be used for coins, cans, cars and table legs; wood can be used for matches, floors, and telegraph poles) or different materials are used for the same thing (spoons can be made from plastic, wood, metal, but not normally from glass). They should think about the properties of materials that make them suitable or unsuitable for particular purposes and they should be encouraged to think about unusual and creative uses for everyday materials. Pupils might find out about people who have developed useful new materials; for example, John Dunlop, Charles Macintosh or John McAdam.</p> <p>Pupils might work scientifically by:</p> <ul style="list-style-type: none">comparing the uses of everyday materials in and around the school with materials found in other places (at home, the journey to school, on visits, and in stories, rhymes and songs);identifying and classifying the uses of different materials, and recording their observations.thinking about unusual and creative uses for everyday materials. <p>Key vocabulary: names of materials – wood, metal, plastic, glass, brick, rock, paper, cardboard Properties of materials – hard, soft, stretchy, stiff, bendy, floppy, waterproof, absorbent, breaks/tears, rough, smooth, shiny, dull, see-through, not see-through opaque, transparent and translucent, reflective, nonreflective, flexible, rigid Shape, push/pushing, pull/pulling, twist/twisting, squash/squashing, bend/bending, stretch/stretching</p>
